

CES Integration (Hospitality)

Making all the right connections

CES Touch software is compatible with the industry's leading software packages, ensuring seamless working across every part of your business.

By connecting key business operations through a single, easy-to-use EPOS software system, CES Touch software helps the hospitality industry work more efficiently and effectively, reducing overheads and maximising profits.

Compatible with Sage

CES Touch links to the Sage Line 50 accounting package, allowing all business sales information to be transferred direct into your company accounts. This means accounts can be updated automatically at the end of every day's trading. And because the system works with Sage nominal codes and department numbers, accurate reporting is ensured.

Compatible with WaveSoft handheld applications

Through handheld applications, hospitality staff are able to send and receive orders to and from the CES Touch software. The order is sent directly to the kitchen and bar printers; dramatically reducing the time taken to complete the process – giving your staff the time to provide customers with the level of personal service they expect. The CES software maintains an itemised bill throughout service. WaveSoft's handheld applications deliver efficient, reliable, scaleable and secure wireless solutions.

Compatible with the leading hotel software suites

The software is also compatible with the leading hotel software packages. It enables customer spend to be transferred back and forth between different departments and a clear record of the customer bill to be accurately maintained at all times. This kind of centralised control prevents the manual duplication of data and enables information to be amended promptly and efficiently, keeping you and, more importantly, your customers happy.
