

# CES Integration (Retail)

ces|software

## Making all the right connections

By connecting key business operations through a single, easy-to-use EPOS software system, CES Touch software helps retailers work more efficiently and effectively, reducing overheads and maximising profits.

### Compatible with Sage

CES Touch links to the Sage Line 50 accounting package, allowing all business sales information to be transferred direct into your company accounts. This means accounts can be updated automatically at the end of every day's trading. And because the system works with Sage nominal codes and department numbers, accurate reporting is ensured.

CES Touch software is compatible with the industry's leading software packages, ensuring seamless working across every part of your business.

### Compatible with Opos checkout scales

When members of staff weigh loose goods, it reduces the risks of fraud and error. Weighing them at the checkout means fewer assistants and increased display space on your self-service counters. CES Touch is accredited by the National Weights and Measures Laboratory. By linking any Opos scale to the EPOS terminal, it enables the automatic calculation of price to be performed at the point of sale. For your customers, there's just one queue, no worries about trying to use self-service scales, and a quick and easy shopping experience.

### Link direct to Booker

CES Touch gives you the option to link direct to Booker, the UK's leading wholesaler for independent retailers. Your order information is sent direct from the software to the Booker ordering service. It speeds up the process at every stage. Once received, the goods can be checked against the original order, which, along with the bill, is archived automatically within the software system.
