

CES Table Planner Module

Service with a smile

Running a successful restaurant takes meticulous organisation. That's why we've created CES Table Planner: the foolproof way to orchestrate your front of house. From the design of the dining room to the status of individual tables, Table Planner takes care of the detail, allowing you to give customers your undivided attention.

- Create a visual representation of your dining areas
- Find out the number of covers and their specific booking status at a glance
- Quick scan, colour-coded system for every stage of the meal
- Standardise service intervals between courses
- Customisable for the way you run your restaurant
- Up-to-the-minute information, from who's serving, to when a table is likely to finish

First impressions count

No matter how good the quality of your food, if your service isn't up to scratch your customers won't be coming back. CES Table Planner helps make impeccable service appear effortless. Designed to seamlessly integrate with your CES Touch EPOS software, it is the fast, efficient and flexible way to ensure the highest standards of customer service are always maintained.

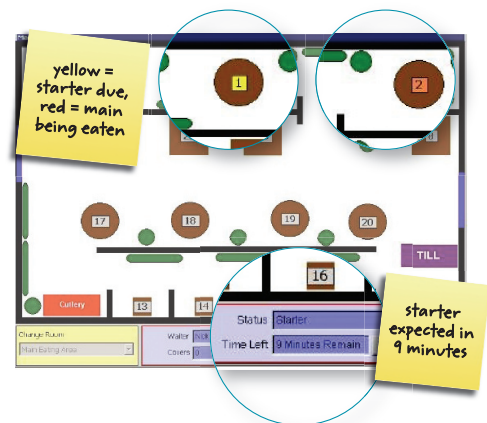

Simplicity itself

Because the system is so easy to access and navigate, each waiter or waitress simply updates the status of his or her allocated tables, throughout service, creating one centralised point of control for everything that happens front of house.

Information in an instant

The display is fully customisable to the needs of your business. From how many covers, to the course being served and the member of staff serving it, your maitre d' knows exactly what's happening on each table at the click of a button. And, by enabling the minute-by-minute monitoring of the time taken between courses, for example, it helps you turn tables more efficiently, keeps you on top of team time management, and ensures you provide a beautifully orchestrated service to your customers.
